

# HEEL RAISER PRO

The Heel Raiser combats excess pressure on the heel by evenly distributing the weight back along the leg and calf, rather than forcing the strain through a single point of contact. This reduces the risk of pressure sores developing.

The boot is fitted around the ankle and the foot, leaving the heel exposed to the air. The folding down flap around the toes can also help to increase air flow if this is needed. The pressure is distributed along the calf, removing concerns over a single pressure point.

- Made from a breathable fabric to assist in controlling moisture and sweat levels.
- Made from a durable and smooth material to help it move easily across sheets, reducing friction and shear while making it easier for the user to adjust their position.
- Machine washable, includes washing net.
- Suitable for anyone in long-term care.
